

Quotations about AMD and The Ultimate Visual Experience™

Last updated: April 8, 2008

"Looking at the real meat of this initial CrossFireX preview, we have to see how impressed we are with the scaling ability that the software gurus at AMD have delivered."

"CrossFireX will also allow for a lot more flexible system building and upgrading for enthusiasts. Say you already own an HD 3870 512MB card - now you can simply buy an HD 3870 X2 and throw it in your system, install the CFX driver and boom, you have three GPUs working for you instead of one."

Ryan Shrout, PC Perspectives

"CrossFireX Just Works! After a reboot we were pleasantly surprised to find CrossFire enabled by default in the CrossFire tab in CCC. We did not have to do a thing; it just simply worked, out of the box, with no trouble at all! This is by far the easiest and simplest CrossFire experience we have ever had, it just worked! As you can see four ATI Radeon HD 3870 X2s will show up in device manager."

"Both of our CrossFireX video cards installed perfectly and CrossFireX was enabled automatically with no effort on our part beyond installing the driver. CrossFireX technology also offers multi-display support which is a huge advantage... CrossFire technology has come a very long way since its introduction."

"We can report complete success with this setup, we were able to play our 3D game fully accelerated on one display while there was 2D still being displayed on the second display. Once we exited the game we could easily go about our work. We are ecstatic to see this support, and thank AMD so very much for providing multi-display support now with CrossFireX."

Brent Justice, HardOCP

"Milestone? Yeah, let's give 'em that much. The driver team deserves some bubbly... for AMD supporters everywhere, this is your reward for spending your dollars, pounds, and euros. Excellent!"

"Their quad CFX DX9 kung-fu is strong."

"As of Catalyst 8.3... it's clear that CrossFireX has picked up... it's a better arrangement, with a lot of advantages not limited to performance."

Max Slowik, TheTechLounge.com

"AMD has set its sights on the HTPC market with the AMD 780G (and 780V) chipset. AMD's goal is to produce power efficiency, silent operation, and more-than-adequate support for casual gaming right out of the box."

"The IGP on the chipset is designed to be powerful enough to handle HD and mainstream gaming by itself without the need of a discrete card... when you add a discrete card to the system, the IGP will add to the card's firepower instead of yielding to it."

"With an Athlon X2 4850e, the TDP is an incredibly efficient 45W and yet Blu-ray and its 1080p goodness are stellar. Eleven years has passed, and dare I say that things are actually heading in a decent direction when it comes to on-board graphics?... For now, AMD's 780G fits the bill perfectly."

CPU Magazine

"AMD's entry-level ATI Radeon HD 3450 graphics card is an amazing deal for those looking to juice up their PC's video playback performance and quality."

"Good Graphics for less than \$100" (rated 8.0 out of 10)"

"AMD's new ATI Radeon HD 3650 is a solid choice for those looking for an inexpensive graphics card that offers good all-around performance."
